

THE NEW IN SOCIAL RESEARCH

A series of talks organised by the Centre for the Study of Invention and Social Process (CSISP)

This seminar series seeks to engage creatively with recent debates about the role of social science in society, and from different vantage points explores claims to newness in social research. Because of a confluence of recent developments, social research seem to have become a favoured object of innovation: from the digitization of social life to the rise of open knowledge movements and the current emphasis on impact and 'engaged social science'. Bringing together a diverse set of speakers, this series approaches this situation as an opportunity to re-examine divisions of labour in social research, not only between experts and amateurs, but also between designers and social scientists; machines, regulations, and people; individuals and crowds.

Spring Term 2012

For dates, times and location please check the CSISP website: <http://www.gold.ac.uk/csisp/events/>

Alex Taylor | Microsoft Research

Executable Biology: at the Borderlands of Technoscience

Matt Fuller and Graham Harwood | Goldsmiths

Database as Funfair
